

Listing of Claims:

1. (Previously presented) A method of treating cervical dysplasia in a subject having cervical dysplasia comprising administering to the subject an amount of a dietary indole selected from the group consisting of 3,3'-Diindolylmethane (DIM) and 2-(Indol-3-ylmethyl)- 3,3'-Diindolylmethane (LTr-1) effective to reduce one or more symptoms associated with cervical dysplasia.
2. (Previously presented) The method of claim 1, wherein the dietary indole is DIM.
3. (original) The method of claim 2, wherein the DIM is suspended as microparticles in a starch carrier matrix.
4. (original) The method of claim 1, wherein the dietary indole is formulated as a cream or suppository.
5. (original) The method of claim 4, wherein the dietary indole is administered by direct application to the vaginal or cervical mucosa of the subject.
6. (original) The method of claim 4, wherein the dietary indole is formulated as a cream, and is administered transdermally.
7. (original) The method of claim 1, wherein the dietary indole is administered orally.
- 8-14. (canceled)
15. (Previously presented) The method of claim 1, wherein the subject is a human female.
